DataVault Mobile

Learning Center + Business Playbook

Version 3.0 | 2026-10-09 | Flutter + Supabase + VTpass + Paystack

The center for learning, finding customers, keeping them, and making the business powerful in Nigeria.

- Founder: Ch 1,2,8,9,14,15,16,17.
- Developer: Ch 4,5,6,7,11,12.
- Support/Agent: Ch 2,3,8,12,16.
- Marketer: Ch 15,16,17.

1. What DataVault is and who it serves

DataVault is a Nigerian VTU shop. Customers fund a wallet once, then buy airtime, data, electricity, cable, exam PINs, internet and betting in 3-4 taps. You earn margin on every sale plus agent storefronts.

- Student Ada: weekly 1GB, 1-tap repeat, gift from parents.
- Trader Chinedu: monthly electricity, schedules.
- Agent Musa: 50 customers via storefront + bulk, markup.
- Parent Ngozi: WhatsApp gifts, clear receipts.

- Promise: token under 30s, always reference + copy, failed = auto-refund, WhatsApp receipt.

Do it now: Write your 2-sentence promise and show it on Home.

2. Customer journey

- 1 Onboard/signup, wallet 0.
- 2 Add money: Paystack live / demo instant.
- 3 Buy: Services > provider > verify > product > Review > Pay.
- 4 Success: token, reference, Share gift, Repeat later.
- 5 Power: Buy again, Schedules, Bulk, Storefront.
- 6 Help: Activity, receipts, PIN, theme.

Live: vtu-verify then vtu-pay (debit -> pending -> VTpass -> success/failed + refund).

Do it now: Run full demo loop on Chrome and screenshot for training.

3. Features and files

Core + 5 moats

- Core: auth, wallet, 7 catalog groups, activity, receipts, beneficiaries, notifications. See lib/screens/purchase.dart, purchase_data.dart, models.dart.
- Repeat: repeat_helper.dart, Buy again carousel 44px, receipt Repeat.
- Schedules: table schedules, schedule_service.runDue(), /app/schedules, auto-run on Home.
- Gift/Request: gift_helper wa.me, gift.dart tabs, share on success + receipt.
- Bulk: /app/bulk, 100 numbers, batch ref, per-number results.
- Storefront: table storefronts, /app/storefront, handle + markup + datavault.ng/s/handle.

Do it now: Pick one moat, list 3 improvements S/M/L.

4. Architecture and money

- Flutter -> Supabase Auth/Postgres -> Edge Deno -> VTpass/Paystack. Secrets only in Edge.
- vtu-pay: JWT -> debit_wallet lock -> pending -> VTpass /api/pay code 000 success + token else failed + refund.
- paystack-webhook: HMAC SHA512 check, server verify, insert once by reference, credit.
- Reference DVT-YYYYMMDD-XXXXXX unique. VtpassMapping aligns serviceIDs.

Do it now: Draw phone->Edge->VTpass success and refund arrows.

5. Code map, setup, operations

- Routes lib/app.dart. Buy lib/screens/purchase.dart. Home lib/screens/home.dart. Money topup.dart. Growth gift/bulk/schedules/storefront. Theme theme.dart. Backend supabase/functions x5. DB migrations 001/002/003.

- Demo: flutter pub get; flutter run -d chrome. Windows needs Developer Mode.
- Live: run 3 SQL, secrets set, functions deploy, Paystack webhook, run with --dart-define USE_EDGE=true, test sandbox then https://vtpass.com.
- Daily: failed/requery, settlements, pricing check. KPIs: success >98%, p50 <30s, repeat >40%, refund <1h.

Do it now: Make Friday KPI sheet.

6. UI/UX customer-first rules

- Use cardColorOf/borderColorOf/displayStyleOf, never raw white in dark. Radius cards 14, inputs 12, touch 44px, body 13-14.
- Measured: muted/white 4.55, primary/white 4.55, highlight 6.99, dark muted/bg 6.38 pass.
- One primary button per screen, show total before Pay, copy+share on tokens.

Do it now: Fix all texts <12px and buttons <44px on one screen.

7. Doing business in Nigeria - foundations

Register CAC business name or Ltd, open business bank + Paystack/Monnify merchant with KYC (BVN, ID, utility bill). Get VTpass production account and fund float. Keep Supabase service_role and Paystack secret only in Edge secrets, never in app.

Money rules in naira

- All amounts in kobo (100 kobo = 1 Naira). Min top-up N100, min VTU N100 enforced in app.
- Example: MTN 1GB cost 450 from VTpass, sell 500, profit 50. 1000 sales/day = 50,000/day.
- Paystack card ~1.5% + N100 cap: on N2000 top-up fee ~30. Price margin to cover it.
- Keep float: VTpass balance + bank for refunds. Never let float hit 0 at night/weekend.
- Reconcile daily: VTpass debits vs transactions success vs wallet credits. Investigate pending over 1h via vtu-query.

Compliance and risk

- CAC + TIN for tax. Keep 5-year transaction logs (Supabase backups). NDPR: explain data use, allow delete.
- Never store card PAN. Fraud: limit new accounts (e.g. N5000/day first week), flag same meter 10x/hour, require PIN + OTP for large.
- Network downtime: show honest pending state, auto-requery, refund fast. Speed + honesty beats cheap price.

Do it now: Open CAC, Paystack business, VTpass production checklists with owners and dates.

8. Finding customers in Nigeria - acquisition

Start where trust already exists. One estate, one campus, one market at a time. WhatsApp is your shop front.

Top 10 channels that work

- 1. WhatsApp broadcast + status daily: token delivered in 20s video, price list, referral N100. Use Gift share from app.
- 2. Campus reps: UNILAG, UI, ABU hostels. Give rep storefront link + 5% commission. Bulk for roommates.
- 3. Markets/shops: POS agents, hair salons, barbers offer free N50 airtime for first DataVault top-up.
- 4. Estates/landlords: one bulk electricity collector, schedule monthly, share receipt group.
- 5. Churches/mosques: bulk airtime for workers, announcement + flyer with QR to storefront.
- 6. TikTok/Instagram reels: screen-record 15s buy data + token copy in Yoruba, Hausa, Igbo, Pidgin.
- 7. Referral engine: giver + receiver both get N100 wallet after first N500 buy. Track in transactions metadata.
- 8. B2B: schools (WAEC/NECO PINs bulk), hotels (cable/internet), betting shops (wallet funding). Offer invoice + CSV.
- 9. Agents: recruit 20 agents with handle datavault.ng/s/musa, 0-20% markup they keep. Train on bulk + schedules.
- 10. Offline: sticker on kiosks Your Data Plug - 080..., free first token demo on the spot.

Scripts you can copy

- Status: I sell cheap data that delivers in 20s with receipt. Chat me or tap datavault.ng/s/musa.
- Broadcast: Good morning! MTN 1GB N500 today, token instantly + refund if fail. Reply your number, I send in 1 min.
- First-buy close: Fund N1000 once, I will send your first 1GB free extra 100MB to prove speed.

Channel	Cost	First goal
WhatsApp	Free	100 contacts, 20 buys
Campus rep	5% comm	1 hostel 50 users
Market	N50 bonus	10 shops
Reels	Free	3 videos/week
Agents x20	Markup	Each 10 sales/wk

Do it now: Launch 3 channels this week. Target: 100 installs, 30 first buys.

9. Keeping customers - retention

Finding is expensive, keeping is profit. Customers stay for speed, honesty when it fails, and memory that you know them.

7 retention levers in app

- 1. Speed SLA: p50 under 30s. Show Processing with reference so they trust waiting.
- 2. Fail well: pending -> requery -> auto-refund under 1h + apology N20 cashback. Call, do not hide.
- 3. Remember: Buy again carousel, beneficiaries nicknames Mama Meter, 1-tap repeat over typing.
- 4. Automate: schedules for salary week (25th electricity, 1st data), low-balance nudge Run due now.
- 5. Reward: 0.5-1% cashback to wallet, streak 7 days bonus, birthday N200 data. Keep simple, pay instantly.
- 6. Talk: WhatsApp receipt every sale, monthly spend summary You spent N8500, saved N300 vs bank.
- 7. Support: reply under 5 min 8am-10pm, save meter numbers, proactively resend token if they ask twice.

Weekly retention routine

- Monday: message due electricity list from schedules.
- Wednesday: failed list, refund + bonus.
- Friday: top 20 buyers thank you + referral ask.
- Sunday: price list + next week auto-buy offer.

Metric	Target	Action if low
7-day return	>45%	Push repeat + cashback
Refund hours	<1	Fix float/requery
Support mins	<5	Add agent shift
Referral share	>15%	Raise to N150

Do it now: Build churn list: no buy 14 days -> send N50-off personal code via WhatsApp.

10. Making it very powerful - scale

Power = many sellers + automation + float + brand people trust. You move from hustle to system.

Phase plan 30-60-90

- Days 1-30: you sell. 200 customers, success >98%, float never 0. Price 3 plans profitably.
- Days 31-60: 20 agents with storefronts. Each 50 sales/week = 1000/week. Add bulk CSV + virtual accounts.
- Days 61-90: B2B estates/schools, reseller API keys, admin pricing dashboard, push + referral ledger. Target 10k tx/month.

Power multipliers

- Agent network: recruit, train 30 min (bulk, schedules, share), weekly leaderboard, instant markup payout.
- Float machine: separate VTpass float account, auto-alert under N50k, daily sweep profit to bank.
- Automation: pg_cron runs runDue hourly even if app closed; Edge retries VTpass twice; webhook idempotent.
- Brand: one name, one yellow Add money button, one promise Delivered in 30s or refunded. Uniform shirts/flyers.
- Partnerships: estate managers, cybercafes for JAMB/WAEC season, viewing centers for DStv bulk.
- Data edge: track best sellers by hour/area, pre-buy float, adjust markup 0-20% by demand.

What not to do

- Do not owe customers float. Do not fake success. Do not raise prices silently. Do not ignore failed.
- Do not share secrets in WhatsApp or app. Do not run negative margin promos over 3 days.

Do it now: Write 90-day numbers: customers, tx, profit, agents, float. Review every Monday.

11. Testing, troubleshooting, roadmap, glossary

- Release check: analyze 0, demo loop all services, dark mode readable, sandbox Paystack + VTpass verify/pay/requery.
- Fix table: symlink->Dev Mode; verify fail->serviceID; no debit in demo->USE_EDGE; double credit->unique ref; webhook 401->secret; white dark cards->cardColorOf.
- Next: contacts picker, CSV, Face ID >N5000, Pidgin/languages, insights, virtual accounts, referrals/cashback, admin, push.
- Words: VTU top-up, Disco, IUC/smartcard, token, PIN, kobo, RLS, webhook, idempotent.

Do it now: Turn Ch 11 into signed release sheet.

War of Greatness

Addon to DataVault Business Documentation

This addon prepares DataVault to beat OPay, PalmPay, Moniepoint and VTpass resellers. Read with founders weekly. Every chapter has tables you copy to paper or Excel.

12. War map - know the battlefield

You do not beat giants on money. You beat them on speed, memory and street trust.

Rival	Their strength	Their weakness	Our strike
OPay/PalmPay	Brand + agents	Slow support	5-min WhatsApp + refund
VTpass	Price	No human	Agent + bulk + receipt
Bank apps	Trust	Expensive data	Cheaper + schedules
Street vendor	Near	No record	Receipt + repeat

Positioning line (say it everywhere)

- DataVault: Delivered in 30 seconds or refunded. Your plug remembers you.
- 3 never-lose: speed p50 <30s, refund <1h, human reply <5min 8am-10pm.
- Update competitor prices every Monday morning before 9am.

Do it now: Fill war table with real prices from 3 rivals this Monday.

13. Money war room

Unit economics - know profit per sale

Plan	Cost	Sell	Profit
MTN 1GB	470	500	30
Airtel 500MB	230	250	20
IKEDC 5000	4950	5000	50
DStv Yanga	5900	6000	100

- Break-even: daily costs (data, staff, ads) / avg profit = tx needed. Example: 10000/40 = 250 tx/day.
- Paystack fee ~1.5% capped: add to top-up margin, push transfer for big amounts.
- Float rule: never below N50k VTpass + N20k bank refunds. Alert on phone. Sweep profit nightly.
- Price log: date, plan, old, new, reason. Never silent hike; announce 3 days before.

Do it now: Build one-page profit sheet for your top 10 plans.

14. Growth war plan - 90 days

Weeks	Mission	Target
1-2	Estate + campus launch	100 installs 30 buys
3-4	20 agents live	400 sales/week
5-8	B2B schools estates	2000 tx/month
9-12	Referral + reels scale	10000 tx/month

Referral + script bank

- Rule: giver + receiver get N100 wallet after first N500 buy. Pay instantly, show in Activity.
- Broadcast: Good morning! 1GB N500 delivers 20s + refund if fail. Reply number.
- Close: Fund N1000 once, I add 100MB free to prove speed.
- Apology: Sorry for delay, refunded + N20 bonus. Your trust is gold.

Do it now: Schedule 90-day calendar with owner per week.

15. Defense - crisis SOP

Great businesses are loved most when things fail. Answer in 15 minutes with a named owner.

Crisis	First 15 min	Owner
VTpass down	Pause buys, tell pending	Tech
Paystack delay	Check webhook, manual verify	Finance
Fraud spike	Cap N5000 new, review	Risk
Wrong token	Resend + call disco	Support
Price hike	Post notice + old 3 days	Founder

- SLA: reply <5min, refund <1h, update customer twice before they ask.
- Log every dispute: ref, amount, action, time. Review Fridays.

Do it now: Print SOP and paste near every support phone.

16. Greatness pack - investor and team

One-pager for investor/lender

- Users, monthly tx, success %, margin/tx, agents, float, next 6-month ask and use.
- Example: 2000 users, 8000 tx/mo, N45 avg profit = N360k/mo, 20 agents, ask N2m for float + ads.

Team SOP

- Morning: float, failed, pending, webhook. Noon: agent questions. Night: sweep profit, backup check.
- New agent training 30 min: bulk, schedules, share, refund words. Test with 3 demo sales.
- Friday KPI: success, p50, repeat, refunds, referrals.

Legal checklist Nigeria

- CAC certificate + TIN. Paystack business KYC. VTpass production contract.
- Privacy notice + delete on request (NDPR). 5-year logs. No card storage.

Do it now: Draft your one-pager and rehearse 3-minute pitch.

17. Brand and content arsenal (extra)

- Look: navy #141C33 wallet, yellow #F0B429 Add money, blue #2F6FED buttons. Same shirt, flyer, status font.
- Content: 3 reels/week (15s buy + token), 1 price status/day, 1 testimony/week with reference hidden.
- Promo ethics: max 3-day loss promo, cap quantity, state terms. Never fake testimony.
- Languages: repeat key lines in Pidgin, Yoruba, Hausa, Igbo. Example: Data don land in 20 seconds.

Do it now: Shoot 3 reels this week with real phone recording.

18. Tech moat and data power (extra)

- Automation: hourly runDue cron, VTpass retry x2, webhook idempotent by reference, requery pending.
- Analytics queries: top plans by hour, failed by provider, repeat cohort 7/30 day, agent leaderboard.
- Security: Edge holds secrets, RLS owner-only, PIN + biometric for pay, cap new accounts, alert 10x meter/hour.
- Next builds: contacts picker, CSV bulk, Face ID >N5000, virtual accounts, referral ledger, admin pricing, push low-data alert.

Do it now: List top 5 SQL questions you want answered weekly and save them.

19. 30-day war checklist (extra)

Day	Action	Done
1	War prices + promise posted	
7	100 installs 30 buys	
14	20 agents trained	
21	B2B 2 deals signed	
30	KPI review + next plan
